

Cracking seamless international trading with SAP Business One®

Before: Challenges and Opportunities

- MACC's previous system did not allow for effective communication between branches resulting in trade opportunities being lost.
- Creating invoices, checking inventory, or generating reports could not be completed remotely.
- New software was required that would allow MACC's parent company (Alsa Assets Management) virtual control over its Malian subsidiary.

Why SAP Business One and Inflexion

- SAP Business One is a recognized brand name that inspired confidence for MACC.
- Inflexion had an excellent team and came highly recommended by MACC's IT manager.
- Inflexion could customize the implementation of SAP Business One to generate the specialized reports required by Alsa Assets Management and MACC.

After: Value-Driven Results

- Since implementation, inventory control has improved greatly and can now be checked and updated in real time.
- Reports and invoices can be generated at the click of a button, ensuring no opportunities are missed.
- The SAP mobile app allows MACC's sales team to check inventory and take orders while traveling.
- Remote access enables all departments to access key information from any device and location.
- MACC's management has been pleased with the security provided by Inflexion's cloud servers for SAP Business One.

“Once we understood SAP Business One it **made our lives much easier.**”

Mr. Dev Ganesh – Finance Manager, Alsa Assets Management Limited.

25% faster processes

since implementation of SAP Business One
